## IN THE CLAIMS

Please amend the claims as follows:

- 1. (original) A data processing system comprising presentation means for presenting at least a part of a document on a display screen, said part being determined by a position of a focal point within the document and by a zoom factor with respect to at least one coordinate direction, the presentation means being capable of adjusting the position of the focal point in response to a user-supplied scroll command, said presentation means being adapted to automatically adjust the zoom factor in dependence upon an aspect of said scroll command.
- 2. (original) A data processing system as claimed in claim 1, wherein said aspect of said scroll command includes at least one of a duration, a repetition rate, or an intensity.
- 3. (currently amended) A data processing system as claimed in claim 1—or 2, wherein a relatively large adjustment of the position of the focal point in a certain coordinate direction causes a zooming-out of said document in at least said coordinate direction.

- 4. (currently amended) A data processing system as claimed in any one of claims 1 to 3 claim 1, wherein the presentation means are adapted to reinstate the zoom factor when a predetermined period of time has lapsed since the scroll command.
- 5. (currently amended) A data processing system as claimed in any one of claims 1 to 4claim 1, wherein the automatic adjustment of the zoom factor proceeds gradually.
- 6. A method of scrolling through a document, comprising a presentation step of presenting at least a part of the document on a display screen, said part being determined by a position of a focal point within the document and by a zoom factor with respect to at least one coordinate direction, the method further comprising a step of adjusting the position of the focal point in response to a user-supplied scroll command, said presentation step being adapted to automatically adjust the zoom factor in dependence upon an aspect of said scroll command.
- 7. (original) A method as claimed in claim 6, wherein said aspect of said scroll command includes at least one of a duration, a repetition rate, or an intensity.

- 8. (currently amended) A method as claimed in claim 6 or 7, wherein a relatively large adjustment of the position of the focal point in a certain coordinate direction causes a zooming-out of said document in at least said coordinate direction.
- 9. (currently amended) A method as claimed in any one of claims 6
  to 8claim 6, wherein the presentation step is adapted to reinstate
  the zoom factor when a predetermined period of time has lapsed
  since the scroll command.
- 10. (currently amended) A method as claimed in any one of claims 6 to 9claim 6, wherein the automatic adjustment of the zoom factor proceeds gradually.
- 11. (currently amended) A computer program product enabling a programmable device, when executing said computer program product, to function as a data processing system as defined in any one of claims 1 to 5 claim 1.
